# Comparison of savings potentials between measures

Marlene Kindler

2025-03-19

Code for the comparison of savings potentials between measures.

To execute, change:
- Login data for Nextcloud
- Adjust download location
- Adjust upload location
- Adjust URLs for uploading

## Load Packages:

```
# install.packages("httr")
# install.packages("readxl")
# install.packages("dplyr")
# install.packages("writexl")
# install.packages("ggplot2")
# install.packages("tidyr")
# install.packages("openxlsx")
# install.packages("flextable")
# install.packages("officer")
# install.packages("tidyverse")
# install.packages("viridis")

library(readxl)
library(httr)
library(dplyr)
library(writexl)
library(ggplot2)
library(tidyr)
library(openxlsx)
library(flextable)
library(officer)
library(tidyverse)

```

## Parameters

Parameters to be adjusted:

```
# storage location
location_download <-
"C:/Users/Klene/Documents/Uni_Bremen/WS24_25/Masterarbeit/R/Daten/"
location_upload <-
"C:/Users/Klene/Documents/Uni_Bremen/WS24_25/Masterarbeit/R/Results/"
# Login data for NextCloud
username <- "mkindler@uni-bremen.de" # username
password <- "xxxxxxx" # password
# WebDAV-URL to upload
nextcloud_url_2 <- "https://nc.uni-
bremen.de/remote.php/dav/files/mkindler%40uni-
bremen.de/Masterarbeit/Masterarbeit_II/R/Results/"
```

## Data preparation

Load data:

```
# Load results data from Excel file
results1 <- read.csv(paste0(location_upload, "01_data.csv"), check.names =
FALSE, stringsAsFactors = FALSE)
results2 <- read.csv(paste0(location_upload, "02_data.csv"), check.names =
FALSE, stringsAsFactors = FALSE)
results3 <- read.csv(paste0(location_upload, "03_data.csv"), check.names =
FALSE, stringsAsFactors = FALSE)
results4 <- read.csv(paste0(location_upload, "04_data.csv"), check.names =
FALSE, stringsAsFactors = FALSE)

# select only data on Climate Change
climateChange1 <- results1[results1$`impact category` == "Climate change",]
%>%
  select("SP total", "norm. SP total", "prop. SP total", "relevant") %>%
